

Revision letter

- Name of Journal: World journal of Clinical Cases
- Title: Korea standardization of apple cancellation test for neglect patients: Observational study
- Manuscript No: 84247

Reviewer 1

I think this is a good study that standardized the apple test in Korea. I look forward to further research on ethnic differences, etc. The study evaluated allo centric neglect with the apple test. The methodology, data presentation, and co nclusions are consistent and seem fine.

Point 1

- 1. However, a little more discussion on the clinical significance would be help ful.

Response: We are very grateful for the good comments to improve the quality of the study. So we have added clinical significance to the discussion. Thank you very much.

Discussion

~~~~~  
~~~~~>>

In addition, in contrast to the existing standardization studies where data collection was performed only in limited places [14], this study was conducted with the general public living in the local community. Consequently, a more accurate normal reference value was obtained. The accuracy score-total omission errors provided by study's results can be used to reduce the number of cases where severe cognitive decline is misinterpreted as neglect. It will also allow for a more accurate assessment of egocentric and allocentric neglect and a more detailed und
