

Dear Editor:

I feel really grateful that the reviewers found issues in my paper and helped me comprehend it better. At the same time, I made some errors during the submission procedure because I am unfamiliar with the submission system. All the modified parts were marked in yellow.

**Comments from Reviewer1:**

In abstract, in case summary what is "+ADw-html+AD4APA-p+AD4-", ADw-span style+AD0AIg-font-size: 14.0pt+ADs- font-family: 'Times New Roman', serif+ADsAIgA+- and.+ADw-/span+AD4APA-/p+AD4APA-/html+AD4- Please write chief complaints as per patient words. He can't say "... between the spleen and stomach for more than half a month. From single case, you cannot conclude "Excellent curative results were obtained with treatment.'need to extensive cohorts to write this conclusion. Reference 1,5.11 anmd 13 needs author name correction, first word missing.

**Reply:**

1. I made some errors in abstract and reference during the submission procedure because I was unfamiliar with the submission method. Both parts were modified.

2. About the chief complaints, a regular medical exam performed on the patient more than a month ago discovered an asymptomatic tumor in the left upper abdomen, which was not discomfort.

3. The conclusion also was modified.

**Comments from Reviewer2:**

The manuscript has improved significantly with the amendments performed. Nevertheless, it is necessary to describe further the rationale behind the hepatic arterial infusion chemotherapy in the Discussion. The answer “Therefore, we administered prophylactic TACE after surgery to prevent recurrence” is questionable because how can TACE be performed without an identifiable lesion?

**Reply:**

1. I cherish the expert recognizing my efforts, therefore thank you very much.

2. As for the answer, “Therefore, we administered prophylactic TACE after surgery to prevent recurrence” is questionable. In actuality, we administered hepatic arteriography and prophylactic hepatic arterial infusion chemotherapy to the whole liver.

3. I described the reason of HAIC in the Discussion.

4. Can the expression of HAIC be removed if it has a significant impact on the article's publication?

**Conclusion:**

We hope that the aforementioned response has not influenced your evaluation of the scientific worth of this article, and we will continue to update it if anything is incorrect.
