

First of all, we would like to thank the esteemed editors and advisor referees, who contributed to making our article more valuable with their valuable and constructive criticisms and gave them the chance to revise. The modified parts are highlighted in yellow.

Reviewer-1

Dear Authors I don't know this your expression in the methods. You describe that the case report don't have illness history, but in the abstract you report that the case report is a 94-year-old comorbid male patient. Please can you describe the comorbidity, ? the patient is smoking for example? and what is your job in adult age? Thanks

R1: The patient's comorbidities are included in the introduction.

Reviewer -2

Authors demonstrate the Iatrogenic Bladder Neck Rupture case reports with catheter insertion patient. As per manuscript title that is may revise the title. The current title may misunderstanding the readers. Add on one or two literature review for support authors management process.

R2: The title has been revised.
