

Dear Editor,

I hope this letter finds you well. I am writing to provide an update on the recent revisions we have made in accordance with the reviewers' recommendations.

Upon a thorough review of the feedback and suggestions from the reviewers, we have diligently worked to incorporate the necessary changes to enhance the quality and accuracy of our manuscript titled **Non-Pharmacological Pain Palliation Methods in Chronic Pancreatitis**.

Regards

Regarding the feedback from the reviewers, here are my point-to-point responses:

In response to the suggestion from referee #07304094, I have added the definition of chronic pancreatitis on page 4, lines 23-27. Additionally, the discussion on endoscopic stent, as recommended by the same referee, has been included on page 10, lines 11-16.

Concerning the suggestion from referee #05226098, I have incorporated the discussion related to "Please emphasize that abstinence from drinking and smoking is important as a pain control measure for patients with chronic pancreatitis" on page 5, lines 15-16. Furthermore, the discussion on "In recent years, endoscopic ultrasound-guided pancreatic duct drainage has been performed for cases in which pancreatic duct drainage by ERCP is difficult," as suggested by the same referee, has been added on page 10, lines 11-16.
