Manuscript Number: ID 82038

Title: **Pleural Effusion in Critically Ill Patients and Intensive Care Setting**

Dear Respected Editors and reviewers

Good day

Thank you very much for the comprehensive review and the precious time you spent reviewing this study. We accepted all the comments of the expert reviewers. We made the advised changes and answered the queries. All the changes were marked in red for easy tracking by the reviewer. The manuscript looks much better with these changes, and we tried to improve the language we could and checked by a native speaker reviewer and certificate is attached. Thank you again for your precious assistance.

Here we are replying point by point:

	Reviewer Comments	Authors reply
Reviewer #1	Very well written.	Thank you very much for your positive feedback.
	Only one thing, the title says clinical implications of pleural effusion in critically ill patients. Although it has been discussed, it has yet to be discussed in detail. I recommend changing the title or adding more of that in the manuscript.	We changed the title according to the reviewer's suggestion.
	Minor spelling mistakes at 1-2 places	An editing company revised the whole manuscript.
Reviewer #2	It is suggested that the conclusion of the article be summarised again. The last part is a summary of the whole article. Summaries the viewpoint of literature in the article.	Thank you for your comments. We updated the conclusion to match the reviewer's comments.
