

Reviewer #1:

Scientific Quality: Grade C (Good)

Language Quality: Grade C (A great deal of language polishing)

Conclusion: Major revision

Specific Comments to Authors: In the article, the authors reported the incidence of case unconscious conditions in the patients of the ED unit. The conclusion demonstrated that the most famous case is the septic condition. The article is interesting; however, the topic has already been evaluated in different countries. It depends on the nation's medical condition (e.g., how convenient CT usage is). Therefore, it isn't easy to compare; these kinds of studies are not worthwhile in generalizing, so the title should be included in the region. Core Tips are required. The style of the article should be divided into main text and tables. In the discussion, they should explain limitations (e.g., influence of COVID-19). The references are small and old. Further English editing is required.

Answer : added to the title (the study at suez canal university hospital in Egypt)

Core tips added

The article divided into main text and tables

Limitations of COVID were added

References replaced and pubmed index and doi were added

It has been revised by Filipodia and certificate now available
