

Dear Reviewers,

Thanks for your great recommendations. I've made adjustment and major revision of the Table part in this paper. Since Taiwan is not a country, I adjusted the words:Country to Region, and also added Races as a comparison. Since this topic: Breast carcinoma with osteoclast-like stromal giant cells is a rare clinical condition, I collected recent case report about this topic. I found that there's no ethnicity correlation with the occurrence of this disease. I would like to share a complete view with radiographic images, clinico-pathologic characteristic features, and immunohistochemical stains. Hoping for further understanding about this rare case. Thank you for your consideration. I look forward to hearing from you.

Sincerely,

Jyh-Cherng Yu, PhD, Professor, Division of General Surgery, Department of Surgery, Tri Service General Hospital, National Defense Medical Center, No. 325, Section 2, Chenggong Road, Neihu District, Taipei 114, Taiwan. doc2010612542@gmail.com
