

Name of journal: World Journal of Clinical Cases

Manuscript NO: 91566

Column: Review

Reviewer #1:

Comments A very useful article about PET-CT. There are only two minor points: 1. You should mention the relation of age of the patients to the normal and abnormal SUV. For example the normal spleen has increased activity in children and young age. 2. Very few spelling mistakes as in page 11, last paragraph, 'reporterd' should be 'reported'

1. You should mention the relation of age of the patients to the normal and abnormal SUV. For example the normal spleen has increased activity in children and young age.

Answer: Thank you for your valuable comments. The specific ages associated with the organs have been added to the manuscript.

2. Very few spelling mistakes as in page 11, last paragraph, 'reporterd' should be 'reported'

Answer: We are sorry to make you inconvenient by making such mistakes. The manuscript was checked by a professional English editing service.

The manuscript has been thoroughly reviewed and revised.

We deeply appreciate your attentive review, advice, and valuable time.

Thank you.
