

Dear Editor,

The study was a original article about "Recurrent Carpal Tunnel Syndrome: Evaluation And Treatment Of The Possible Causes". Thank you for your review of the manuscript. I appreciate the insight and constructive comments you and the reviewer have offered, which will be very useful to me in my future articles.

Below you will find the changes in the manuscript done according to your recommendations.

1. Reviewer Comments

The authors report on 23 recurrent carpal tunnel syndrome from over 400 patients treated. I like the manuscript, although data may show a better graphical presentation. The authors should also expand the evolution of CTS decompression surgery with open technique, which was first performed by Herbert Galloway in 1924 and later described by Sir James Learmont in 1933. They should add a table showing the milestones of the decompression surgery that have been perused during the last 80 years.

Reply;

Thank you for your review of the manuscript. We have prepared the data again with graphical presentation. We added a table showing the milestones of the decompression surgery.

2. Reviewer Comments

This is an interesting report. Although the number of cases is limited, the authors describe well their experience and make recommendations also on the basis of published literature. The discussion is thorough and appropriate. The English language needs some improvement.

Reply;

Thank you for your review of the manuscript. We reviewed the English language.
