5) The reviewer's comment :

Abbreviations. Standard abbreviations should be defined in the abstract and in the main body of the manuscript upon first mention in the text. In general, terms should not be abbreviated unless they are used three times or more and the abbreviation is helpful to the reader. Permissible abbreviations are listed in Units, Symbols and Abbreviations: A Guide for Biological and Medical Editors and Authors (Ed. Baron DN, 1988) published by The Royal Society of Medicine, London. Certain commonly used abbreviations, such as DNA, RNA, HIV, LD50, PCR, HBV, ECG, WBC, RBC, CT, ESR, CSF, IgG, ELISA, PBS, ATP, EDTA and mAb, do not need to be defined and can be used directly. Italics. Quantities: *t*, time or temperature; *c*, concentration; *A*, area; *l*, length; *m*, mass; *V*, volume. Genotypes: *gyrA*, *arg 1*, *c myc*, *c fos*, etc. Restriction enzymes: *EcoRI*, *HindI*, *BamHI*, *Kbo I*, *Kpn I*, etc. Biological nomenclature: *H. pylori*, *E. coli*, etc. Latin terms: *i.e.*, *e.g.*, *via*, etc

The authors' Answer:

Dens invaginatus (DI) was defined in the first sentence, line 1, paragraph 1, of this article's introduction. Thanks for your kind reminder.
