

Dear reviewers:

I am very grateful to your comments for the manuscript. Thanks for your recognition for our work. Since we didn't receive specific questions, we reconsidered the strengths and weaknesses of the manuscript. The patient data in this case is sufficient enough to reproduce diagnosis and treatment procedure. And the chief complaint of lumps and infection without contamination could be confusing during diagnosis. At the same time, as the rare as the case, the references we can refer to are few.

We also revised the manuscript on contents and format, I hope that the revised manuscript is now suitable for publication. I should like to express my appreciation to you again.

Best regards

Sincerely yours

Dr. Zhang
