## PEER-REVIEW REPORT

**Reviewer's country:** Slovakia

### SPECIFIC COMMENTS TO AUTHORS

Recension of manuscript No. 50356 Sister Mary Joseph's Nodule in Endometrial Carcinoma: A Case Report and Literature Review, written by Yang Li, Peng Guo, Bin Wang and Yitao Jia", which will be published in World Journal of Clinical Cases. The structure of the manuscript is in keeping with the standard required criteria. The topic of the work is very interesting because Sister Mary Joseph's nodule is very rare, which may occur independently or simultaneously with malignant tumors in the abdominal cavity and has a poor prognosis. Endometrial carcinoma is the most common malignant tumor in the upper segment of the female reproductive tract; however, it rarely occurs with Sister Mary Joseph's nodule. A case of endometrial carcinoma with Sister Mary Joseph's nodule was reported in this article. The authors describe a case of endometrial carcinoma with Sister Mary Joseph's nodule. In this article, the authors notified that if once the umbilical mass is found, the possibility of Sister Mary Joseph's nodule should be considered. They also point out take into account the risk prognosis of endometrial carcinoma complicated with umbilical metastasis, especially in patients with advanced female tumors, and it is crucial to choose an appropriate treatment. Work is clearly legible, brings summarizes new knowledge. The citations are actual, and their format respects the usual standards. The conclusion reflects the author's results, and these can be accepted. I recommend the manuscript to be published. Kosice, 25. July 2019 MUDr. Jana Katuchova, PhD. Professor of Department of Surgery Medical Faculty at Safarik University and University Hospital Kosice Slovakia
