SPECIFIC COMMENTS TO AUTHORS

This manuscript reported a rare case of denomyomatous hyperplasia of the distal common bile duct demonstrated by endoscopic ultrasound, which revealed a nodular change and bile duct wall thickening. This case is very interesting, and the manuscript is very well written. The diagnosis and treatment is very clear. It's will guide the clinicians well. In my opinion, this manuscript can be accepted for publication after a minor language editing. Well done!

Dear Reviewers,

Thank you very much for your comment. The language was edited again.

SPECIFIC COMMENTS TO AUTHORS

Excellent case report about the adenomyomatous hyperplasia of the distal common bile duct. The distal common bile duct is an extremely rare site of adenomyomatous hyperplasia. And it is very difficult to distinguish an adenomyoma from malignant cancer before operation. This case will remind the clinicians that the EUS is an important diagnostic modality that can help establish the diagnosis of adenomyomatous hyperplasia in common bile duct patients. Overall, this manuscript is well written. I have no special comments.

Dear Reviewers,

I am extremely appreciative of your comments and suggestions.

I have uploaded the approved grant application forms. For the references, I have added PubMed citation numbers and DOI citation to the reference list and list all authors.

Thank you again for your time and patience.

Yours Sincerely

Liming Xu
