

Thanks a lot for the reviews.

Question 1: Indicate normal ranges of laboratory parameters (mg, ca etc.)

Answer: I have added the normal ranges of laboratory parameters. Normal range of hemoglobin 110-160 g/L, normal range of total calcium 2.25-2.75 mmol/L, normal range of magnesium 0.87-1.12 mmol/L.

Question 2: You said that "Enteroscopy showed chronic inflammation of the small intestine. " This terminology used in histopathological identification. Please use definition of macroscopic visualization (eritema, friability etc).

Answer: I made a mistake of the results. I sincerely apologize for my lack of rigor. The gastroscope and enteroscopy read: mucosal edema of the stomach, duodenum mucosa, small intestine mucosa, and large intestine mucosa were roughly normal. The pathological findings of gastroscope and enteroscopy read: chronic inflammation of the stomach, small intestine and large intestine. Results above were from the hospital department. The pathological findings of this paper were from laboratory done by my partner.
