

Dear editors and reviewers

Thank you very much for your letter and the comments on our paper. We have checked the manuscript and revised it according to the comments. We submit here the revised manuscript as well as a list of changes.

If you have any question about this paper, please don't hesitate to let me know.

Yours sincerely,  
Qian Chen,

Department of Gynecology and Obstetrics, West China Second University Hospital,  
Sichuan University, Chengdu 610041, Sichuan Province, China. Cqian2017@163.com.

We have revised our paper according to the comments as follows:

1 conclusion: This case may help detailed understanding for rare clinical manifestations of SST of the ovary. SSTs are rare benign ovarian neoplasms that are usually diagnosed in young women, it can also occur in children and adolescents, which may cause precocious puberty, affecting the physical and mental health of these patients. The only treatment for STT is surgical resection. Therefore, gynecologists should be aware of this potential complication in adolescent girls with a mass in the ovary.

2 Figure 3 is rearranged.

3 we add the PMID and DOI in the reference list.
