Le Zhang

Science Editor, Editorial Office of Baishideng Publishing Group Inc

Dear Le Zhang,

Re: Revise submission, Manuscript Number: **53076**, Title: **The rescue treatment and follow-up intervention of a left main acute myocardial infarction with typical carina shift under 3D- Optical Coherence Tomography: A case report**

Thanks for your and the reviewers' useful comments and suggestions on the structure of my manuscript.

I have modified the manuscript accordingly, and detailed corrections are listed below:

Reviewer 1 (No. ID: 00227375) : Conclusion: Accept (General priority)

Scientific Quality: Grade B (Very Good)

Language Quality: Grade A (Priority publishing)

This is an interesting case report about PCI of a left main AMI with typical carina shift using 3D-OCT. This manuscript is nicely structured and well written. I have no question about this manuscript.

Answer:

Thank you so much. I am really appreciated.

Reviewer 2. (No. ID: 00227531) Conclusion: Minor revision

Scientific Quality: Grade B (Very Good)

Language Quality: Grade B (Minor language polishing)

Nice clinical case showing the value of imaging with optical coherence imaging to successfully solve a complicated case
Minor comments: -I think that in page 6 regarding treatment the authors mean " treatment decision consist of CABG or stent implantation" -Also in the same pag I think that the authors mean that " after 1 week the patient has neither recurrent angina nor difficult breathing". Please revise.

Answer:

Thank you. The two parts have been revised accordingly.

Figure 1: please indicate what TCFA stands for.

Answer:

Thank you. This part has been revised accordingly.

Figure 2: Second image in 2d row seems to be upside down. A number (10) is upside down in the 3 figures of this row.

Answer:

Thank you. For this part, our concern is that organizing the images in the same direction with the CAG will make the readers more easily to follow. And we also have explained it in the figure legends.

I have revised the manuscript according to the reviewers' comment and would like to re-submit this manuscript, and hope it is acceptable for publication in the journal. If there are any problems or questions about our paper, please do not hesitate to let us know.

Thank you very much for your attention to our paper.

Sincerely yours,

Yu-Quan He,
