

**Name of Journal:** *World Journal of Clinical Cases*

**Manuscript NO:** 52763

**Manuscript Type:** CASE REPORT

**Title:** A Systemic Treatment for Severe Concentrated Sulfuric Acid Burns in an Adult Male at High Altitude: A Case Report and Literature Review

Dear editor:

Thanks for your efficient work and reviewer's suggestions. I have revised my manuscript and corresponding modifications have been highlighted in the revised manuscript.

Some related papers are suggested to cite, such as Danger of being second victim when resuscitating chemically burned patient.

Author reply: The relative literature is of importance for our work, and the literature has been cited in the revised manuscript.

COMMENTS TO AUTHOR:

Reviewer #1: I would like to advise the authors to add a short statement of emphasizing the danger of being second victim when resuscitating chemically burned patient. For instance following references may be added to the list; Danger of being second victim when resuscitating chemically burned patient. Coban YK, Ozkan KU. Burns. 2005 Aug;31(5):668-9. Epub 2005 Apr 25.
