Dear Editors,

Thank you very much for your comments and the valuable comments from

reviewers.

The authors have carefully answered the questions according to the reviewer's request, and

have carefully revised the article as follows:

＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝＝

1.Question1: about the references

Answer: There is 1 self-cited references included at the first submission. In the revised version, this reference has been deleted conserding that it is not most closely related to the topic of the manuscript. No recommended references are included.

2. **Question2: about the informed consent of treatment with a wrong document**

Answer: This case has two informed consent of treatment at 2019.09.06 and 2019.09.09, respectively. The first is for selective embryo aspiration and the second is about vacuum suction and curettage, both including the possible risk of preserving the intrauterine pregnancy. The two informed consent have been merged into one. In the revised version, we have replaced the informed consent of 2019.09.09 to the more detailed informed consent.

Explanations: Because the surgical intervention for this case is not common, no available item for this two-step intervention could be selected from our medical record system. Therefore, the informed consent of treatment was signed one by one during the two-step intervention.

3. **Question3: about the fund**

Answer:The study was supported by Zhejiang National Science Foundation and Zhejiang Bureau of Traditional Chinese Medicine. The two approved grant application form(s) have been uploaded (the second one uploaded as Supplementary material).

4.**Question 4：the title is too long**

Answer: The title has been changed to < **Management of heterotopic cesarean scar**

pregnancy with preservation of intrauterine pregnancy: A case report and literature review>

with 17 words.

5.**Question 5：original pictures**

Answer:The original pictures have been uploaded as PowerPoint.

Once again, thank you very much for your valuable comments on this article.
