Title: Analysis of ocular structural parameters and higher-order aberrations in Chinese children with myopia

Author: Xue Li¹, Qi Hu², Qianru Wang³, Ziqing Feng⁴, Fan Yang⁵, Chunyu Du⁶

Name of Journal: World Journal of Clinical Cases

Manuscript NO: 66555

First of all, thank you for your careful guidance of this article. Revision has been made according to the suggestions of the reviewer:

Reviewer: 06059397

This is an interesting study of the ocular structural parameters and higherorder aberrations in myopia children. Myopia and high myopia are global public concerns. High myopia is often accompanied by Al prolongation and fundus changes. It is still unclear whether there is a correlation between the changes of ocular structural parameters and the development of myopia. In this study, the authors observed the changes in ocular structural parameters of myopia to further explore the progress of high myopia. Those results may be helpful for the discussion of the ongoing myopic shift in childhood. After a minor revision, this study can be accepted for publication. Comments: (1) Overall, this manuscript is very well written. However, some minor language polishing should be revised. And some typo errors should be corrected. Such as some extra space, and some unnecessary capitalizations. (2) Please avoid unusual abbreviations. (3) Data in tables are very interesting. The check the table 4, it's too small for a table. You can add the data into the main text, and delete this table. (4) Please add a short background for the abstract. And short the results in the abstract.

Thank you for your advice.

After receiving the comments, we read the article carefully and found some

small loopholes in the language of the article and made modifications. And I avoid unusual abbreviations. I added a background section to the abstract and cut the results in the abstract. Edited the chart. And I changed the style of the references.

According to the suggestion, we changed the relavant description.

Thank you again for publishing our manuscript in the World Journal of Clinical Cases.

Sincerely Yours,

Xue Li
