

Answering to the reviewers.

Specific Comments To Authors:

This is an interesting study of GRACE and SYNTAX scores in acute coronary syndrome. Currently, risk assessment model GRACE score is used to predict the prognosis of patients with NSTEMI-ACS. However, it does not take the results of patients' coronary angiography into consideration. The present study discussed the value of GRACE and SYNTAX scores for predicting the prognosis of patients with NSTEMI-ACS. Overall, this study is very well designed, and the results are interesting. After a minor correction, it can be accepted for publication.

1. Some minor language polishing should be revised.

Answer: The manuscript was carefully edited.

2. The tables should be edited.

Answer: Tables were edited and updated.

3. References must be formatted and updated according to the journal's guideline.

Answer: We read the guidelines carefully, and revised the manuscript again.
