Title: Remote nursing training model combined with proceduralization in intensive care unit dealing with patients with COVID-19

Response to Reviewers' comments

Dear Editor,

We thank you for your careful consideration of our manuscript. We appreciate your response and positive feedback. After carefully reviewing the comments made by the Reviewers, we have modified the manuscript to improve the presentation of our manuscript, therefore providing a complete context for the research that may be of interest to your readers.

We hope that you will find the revised paper suitable for publication, and we look forward to contributing to your journal. Please do not hesitate to contact us with other questions or concerns regarding the manuscript.

Reviewer #1:

Scientific Quality: Grade A (Excellent)

Language Quality: Grade B (Minor language polishing)

Conclusion: Accept (High priority)

Specific Comments to Authors: This is a review article on health workers dealing with COVID-19. It is written extensively and simply. It is informative and will give useful information to readers. Specialized and targeted nursing training are essential and indispensable means to avoid occupational exposure and compensate for the shortage of professional ICU nurses. In this study, we documented and shared experiences in transitioning from traditional face-to-face programs to remote form combined with proceduralization nursing training mode in our daily work experiences during the COVID-19 pandemic, which has shown to be helpful for nurses working in the ICU. These findings provide valid reference for nursing training of health care workers in other regions and countries. I recommend for publication.

Response: Thanks for your positive comments.

Reviewer #2:

Scientific Quality: Grade B (Very good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Minor revision

Specific Comments to Authors: The review is very well written and the topic explored is timely relevant. The authors organized very well a sequence of available knowledge to document and share experiences in transitioning from traditional face-to-face programs to remote form combined with proceduralization nursing training mode in our daily work experiences during the COVID-19 pandemic, which has shown to be helpful for nurses working in the ICU. The article has potential to be useful to hospital teams. The only two fragments where I recommend revision are: 1) some minor English revision; and 2) modify the format of tables.

Response: *Thanks for your positive comments. And* 1) We have re-checked the whole manuscript to avoid any grammar errors or typos, and the modifications are highlighted red in the revised manuscript. 2) The tables were modified accordingly and will be resubmitted in a separate word file.

By the way, in the revised manuscript we added a supporting funding information of “and Teaching project of the First Affiliated Hospital of Harbin Medical University (2017014).”, which was also highlighted in red in the title page, please check if this meets your journal’s policy.
