

Answer to Reviewer 1

We thank the reviewer for his kind comments. He really understood the aim of the manuscript. English Language has been revised.

Answer to Reviewer 2

We thank very much the Reviewer for his comments. However, we disagree with him, because most of RCT have been performed in hospitalized patients at a late stage of disease, not at the early stage, and have not verified the efficacy of NSAIDs (in particular, indomethacin) given as early at home treatment at the beginning of symptoms. In addition, in the mentioned Recovery Trial, aspirin was given only as anti-platelet agent. English Language of the manuscript has been revised.

Answer to Reviewer 3

We thank the reviewer for his kind comments. He really understood the purpose of the manuscript. English Language has been revised.
