### COMMENTS TO AUTHORS

1. This reviewer is afraid that the application of meta-analysis is appropriate. In view of critical differences in the primary diseases and the chemotherapy regimens, the value of the meta-analyses is extremely doubtful. Rather, simple review seems appropriate.

2. Some descriptions for technical aspects had better be presented.

[We have added some descriptions for technical aspects in COMMENTS.](#)

3. Adverse events should be summarized.

[Post-operative toxicity and major complications were listed in our review \(Table 4\).](#)
