

## ANSWERING REVIEWERS

September 8, 2013

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 5100-review.doc).

Title: New progress in endoscopic treatment of esophageal diseases

**Author:** Ping-hong ZHOU, Qiang SHI, Yun-shi ZHONG, Li-qing YAO

**Name of Journal:** *World Journal of Gastroenterology*

**ESPS Manuscript NO:** 5100

The manuscript has been improved according to the suggestions of reviewers:

1 Format has been updated

yes

2 Revision has been made according to the suggestions of the reviewer

(1) I read your paper interestingly. This paper is very significant. However, there are some problems. I can not understand the methods of 'Thoracoscope assisted tunnel endoscopic resection'. You should correct the contents 'the detailed steps'. And if you can, please attach the figure or the scheme of 'Thoracoscope assisted tunnel endoscopic resection'.

**Thank you. The concept -Thoracoscope assisted tunnel endoscopic resection-was proposed by our endoscopy center and was first written in English article. So there are maybe not descripted clearly. Now we have tried to write more concise and given the picture of the surgery.**

(2) The authors described recent topics of endoscopic treatment in esophagus. They summarized endoscopic treatments based on ESD briefly, and it was adequate as "Topic Highlight". I have some minor questions and comments. 1. In ESD section, hyarluronic acid is commonly used as injection solution, and coagulation forceps is mainly used for coagulation of vessels in the artificial ulcer. 2. The lesion presented in Figure 1 was too small. Such small lesions were good candidate of EMR. Please replace this case for larger one. 3. Some important papers were not listed in References section. For example, POEM was developed by Dr. Haruhiro Inoue, but his paper was not included. We should give the priority to the pioneer.

**Thank you very much.**

**1.The hyarluronic acid was not used in our endoscopy center, so we did not refer to it. we will added it in our article.** "Although numerous injection solutions have been proposed and tested, saline is the most commonly used in clinic due to its low cost and ease of use. The indigo carmine was added to make the layer clear and the epinephrine was used to **reduce bleeding**. The hyarluronic acid was also used to improve submucosal lift durations."

**2.And we changed "the hot biopsy forceps" to "the coagulation forceps". We have changed the Figure 1.**

**3. we have added many necessary references, and we are sorry for not including the Dr. Haruhiro Inoue's article in the original article.**

(3) I have found examples in your manuscript of verbatim copying of prior work. This is not allowed except

perhaps in the case of authors' own preliminary papers (abstract, conference, workshop, symposia, theses and dissertations). Examples – Some or all of the manuscript is related to the authors' journal paper not cited: Techniques in Gastrointestinal Endoscopy Volume 15, Issue 3, July 2013, Pages 160–163 Offshoots of peroral endoscopic myotomy: Submucosal tunneling endoscopic resection, pyloromyotomy, and beyond ☆ Quan-Lin Li, MD, Ping-Hong Zhou, MD Other authors copied verbatim - Gastrointest Endosc. 2011 Dec;74(6):1194-200. doi: 10.1016/j.gie.2011.07.039. Epub 2011 Oct 1. Endoscopic submucosal dissection for treatment of esophageal submucosal tumors originating from the muscularis propria layer. Shi Q, Zhong YS, Yao LQ, Zhou PH, Xu MD, Wang P. Endoscopic submucosal dissection for superficial esophageal ... by S Ono - ?2012 Endoscopic submucosal dissection for superficial duodenal ... by T Honda - ?2009 Endoscopic submucosal dissection of esophageal cancer using the ... by Y Kawahara - ?2013 Endoscopic submucosal dissection for superficial esophageal ... by S Ono - ?2012 Clinical Impact of Endoscopic Submucosal Dissection for Gastric ... by WF Chen - ?2012 Thieme E-Journals - Endoscopy / Full Text - Georg Thieme Verlag Offshoots of peroral endoscopic myotomy: Submucosal tunneling .

**Thank you. This article, in the highlight topic series, provides detailed information on the indication and treatment skill for esophageal diseases. We read many article and summarizes some surgery steps, which maybe the same with the prior work. We have changed the sentence and added the article which we referred to as References.**

3 References and typesetting were corrected

yes

Thank you again for publishing our manuscript in the *World Journal of Gastroenterology*.

Sincerely yours,

*ZHOU Ping-hong and SHI Qiang*
