This is a gut written study on choosing between anti-EGFR and anti-VEGF agents in the first line treatment of RAS wild type colorectal cancer.

*Response:* none

**Reviewed by 00056678**

The editorial talks about the efficacy of the VEGF and EGFR-chemotherapy in metastatic colorectal cancer in first line. The editorial summarizes the different trials which test VEGF or EGFR in first line and the controverse results. The authors argue the different explanations and conclude that the anti-EGFR should be used in first line when the patients are potentially resectable or symptomatic patients. This well-written editorial should be published.

*Response:* none

Thank you again for publishing our manuscript in the *World Journal of Gastroenterology*.

Sincerely yours,

A handwritten signature in black ink, appearing to read 'Vincenzo Formica', on a light grey background.
