ESPS Manuscript NO: 17941

The manuscript has been improved according to the suggestions of reviewers:

1 Format has been corrected

2 Revision has been made according to the suggestions of the reviewer

We have made the correction of the numbering of the full involvement of the sphincter sphincter lesion with Starck 4.

3 It could be used a table to express the statistical results on the sphincter amplitude. We believed at the time that it would not be useful for the message of the article.

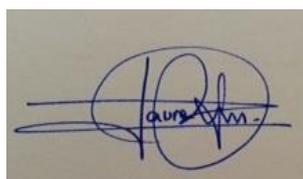

We show the table that can be use if the editor thinks fit.
