

Dear Sir,

Thank you very much for the comments of the reviewers.

The second reviewer pointed out to us the redundancies between the introduction and the abstract.

1. We reduced the abstract, but it seems important to us to keep some important informative elements. I hope this change will suit you.

2. Regarding the requested picture, I do not have the picture of the initial MAL release in the patient presented in this clinical case, but I propose to include a document in the supplementary material that shows photos in another patient including a recommendation on the technique of MAL release.

I hope these changes will suit you

*A postscript : Referring to Figure 4, as the required maximum size is 4MB, I downloaded each part of Figure 4 to keep the quality of the pictures (4 A, B, C, D)*

Sincerelly yours

Professor Jean Robert Delpero
