

Dear editor:

Enclosed please find the revised manuscript (38652) "Usefulness of three-dimensional visualization technology in minimally invasive treatment for infected necrotizing pancreatitis". We greatly appreciate the comments and have learned a lot from the reviewers. "Article highlights" and other appropriate changes have been finished and the critics have been addressed as following.

Reviewer #1: A minor language revision is required.

The paper was polished by highly qualified native English speaking editors at MedSci, a company offered the services in paper evaluation, professional translation, language editing and publication support. Also, the certificate of English editing was enclosed.

Reviewer #2: No special comments to the authors.

Reviewer #3: 1 Overall, the manuscript is well written. Some minor language polishing can be revised. 2 The figures and tables are very clear and interesting. 3 References can be updated and discussed.

As mentioned before, the paper was re-edited by a professional language company and the certificate was uploaded. Also, the references were all checked again by Wang PF and Su JJ.

We feel that these changes are more persuasive and strongly support our statement in the manuscript. We hope the reviewers agree with our answers and the new version of this manuscript meets the standard of the prestigious journal of World Journal of Gastroenterology. Thank you very much for your consideration.

Sincerely yours,

Wang PF, M.D. Ph.D.
