MS Type: case report

Title: Infliximab is effective in the treatment of ulcerative colitis with dermatomyositis: A case report

Dear editor:

We are very grateful for your attention and the reviewers' evaluation and comments on our paper "Infliximab is effective in the treatment of ulcerative colitis with dermatomyositis: a case report." We have revised the manuscript in accordance with your kind advice and the reviewers' detailed suggestions. Please find enclosed the responses to the reviewers.

1. One of the reviewers suggested that we provide additional information about infliximab, including its properties, dosage, and side effects.

Reply: We have added information about infliximab to the article. This information includes the properties, treatment mechanism, dosage, and side effects of the drug. These changes are in red font.

2. The science editor found that we did not provide the approved grant application form(s).

Reply: We have also uploaded the relevant documents in a file named "approval document" with the revised manuscript.

3. The science editor found that the authors did not provide the original figures.

Reply: We have also uploaded the original figures with the revised manuscript.

4. Given that we could not find the original data on C-reactive protein and erythrocyte sedimentation rates during the hospitalization of the patient, we deleted the information about these two blood draw indicators in the revised draft.

5. After repeated confirmation and verification, we have revised the resume information of the doctors who participated in the MDT meeting. These revisions have been marked in red in the article.

6. In this revision, we have added relevant references on the clinical types, Montreal classification, and Mayo score of ulcerative colitis.

We sincerely hope this manuscript will be finally acceptable to be published

on World Journal of Gastroenterology. Thank you very much for all your help and looking forward to hearing from you soon.
