

## Response to Reviewer Comments

### Reviewer(s)' Comments to Author:1

1. Has the author considered writing paragraph on HBV coinfection treatment with viral hepatitis such as HCV and HDV?

**Reply:** Initially, I intended to write about Asian hepatitis, but the scope was too broad. Therefore, I focused on hepatitis B and wrote about the immune tolerance phase and global guidelines. This is beyond the scope of this review

2. Minor spelling errors:

- Page 3—line 21 remove (,) after 2%

Page 6 – line 7 morality -> mortality

Line 8 put article before quality

Line 15 ->consider sex instead of gender

Page12-21->correct Tenofovir

**Reply:** Thank you for pointing out these errors. They have been corrected, as suggested. However, please note that an article is not required before the phrase “quality of life”.

### Reviewer(s)' Comments to Author:2

Thanks to the authors for this good-organised review. The manuscript interprets the findings adequately and appropriately but information and literature in children is low. If the authors give more information about hepatitis B infection in children, with latest literature, the article would be better.

**Reply:** Thank you for your comment. We have added the latest literature on hepatitis B infection in children, as suggested (P11L24-P12L11).
