

ANSWER TO THE REVIEWERS

Manuscript ID: World Journal of Gastroenterology Manuscript NO: 79807

Title: Transplant immunology in liver, are the HLA antibodies and HLA/KIR genes actually important?

The manuscript has been improved according to the REVIEWERS' suggestions as follows. We have added the answers to their related questions (bold) to facilitate understanding of the replies. All changes are marked in red in the manuscript and italics in this text. The authors appreciate the effort to evaluate to improve our work.

Reviewer #1:

1. Put the number of pages and lines for the reviewer's reference.

As indicated by the reviewer, page and line numbers have been included to facilitate the reviewer's comments.

2. (Abstract page, the 3rd line from the bottom) CM need an explanation.

The meaning of CM has been incorporated into the abstract as indicated by the reviewer.

3. From where does the body start? Arrange the body. Please put the subsection to the body of the text.

A subsection has been created following the introduction.

Reviewer #2:

The authors have submitted an editorial on an important topic of HLA antibodies and HLA/KIR genetic testing in liver transplant. Although the article discusses the findings of most of the relevant studies, but a table summarizing the salient features of these studies would be beneficial for the readers.

As indicated by the reviewer, a Figure 1 with the most outstanding findings of the analyzed studies can be found at the end of the document after the bibliography section.
