Advances in Acute and Chronic Pancreatitis: A Narrative Review

Williamson B. Strum, MD

C. Richard Boland, MD

**Comments 1:**

This review is of scientific interest. Objective is well stated and information provided in accordance. Manuscript may be accepted. However, minor grammar correction need to corrected prior to publication.

**Comments 2:**

Dear Authors, Overall, this is a clear, concise, and well-written manuscript but similarity is high (%39). You should edit and rephrase it. It should be less than 20%. You should check grammer mistakes.

**Response to reviewers:**

There were no specific suggestions. The reviewers asked for some “editing” without specifying what was to be edited. Therefore, we went through the manuscript, fixed any grammatical errors, shortened it somewhat, and we think the manuscript is clearer now.

Sincerely,

CR Boland and WB Strum
