

Reviewer: The human understanding of chronic gastritis and its etiology, occurrence, and development has gone through a long process, which fully reflects the development of medicine. This literature review described the key milestones in the history of chronic gastritis research. By reading this review, readers can learn about the efforts and achievements of numerous scholars in exploring the mechanism of the evolution of gastric mucosa inflammatory changes to atrophy, intestinal metaplasia, dysplasia and gastric cancer. In recent years, advances in molecular biology and genetic engineering have opened up new opportunities for early diagnosis and prevention of GC.

Response: We express our sincere gratitude that You were able to review our article in the shortest possible time and give it such a high rating.

I would like to especially thank you for Your deep, comprehensive analysis of our manuscript and Your high professionalism in the field of the stated problem.

We are grateful to You for your positive review and the comments with which You accompanied it.
