

Reviewer #1:

Scientific Quality: Grade B (Very good)

Language Quality: Grade A (Priority publishing)

Conclusion: Accept (High priority)

Specific Comments to Authors:

1) Overall goal and importance of the manuscript This is a review article detailing the indications of adjuvant therapy, therapeutic options and outcomes from adjuvant therapy after treatment of HCC. This is a very important subject as patients suffering from HCC continue to carry a high recurrence rate and a much lower overall/disease free survival compared to many other pathologies. 2) Mechanics of the writing. The article is written clearly and in such a manner that it is easy to understand. It is free from over grammatical errors. 3) Manuscript design This is a brief review article and therefore does not include any experimental design or statistical analysis. The supplement has a nicely made chart diagram which is also easy to understand. While this manuscript does not add any new information to an existing body of evidence, it is a reasonably well written review. If this purpose of this article is to serve as a brief review or an editorial then it is reasonable to accept this for publication. Thank you so much.

Response: We thank the reviewer.
