

Responses to Reviewers

We thank the reviewers for their comments/suggestions – they have been duly dealt with in the revised version of the manuscript.

Rev: 03477174

The title may have the form of "SARS-CoV-2 (or COVID-19) and hyperglycemia/diabetes" instead of "Coronaviridae and hyperglycemia/diabetes." Because our main subject is not "Coronaviridae".

Answer: In the revised version of the manuscript the title has changed accordingly to “Covid-19 and hyperglycemia/diabetes”.

Rev: 05427465

I want to congratulate authors Dr. Konstantinos MICHALAKIS and Dr. Ioannis ILIAS for contributing to World Journal of Diabetes. This is an important topic and highly relevant for our readers. In this review article authors presented summary of essential literature on glycemia and COVID-19 and plausible implicated pathways/mechanisms. Authors well presented the manuscript with great organization, flow and pertinent literature references. Specific comments: Authors may need to consider changing the title of manuscript The term Coronaviridae is broad. Coronaviridae family divided into two subfamilies, the Coronaviridae and the Toroviridae to therefore using COVID-19 or SARS-COV-2 is more appropriate. Authors claimed reporting implicated pathways/mechanisms for better readability, please consider table or schematic path way showing various pathways and mechanisms implicated in glycemia in COVID-19

Answer: In the revised version of the manuscript the title has changed accordingly to “Covid-19 and hyperglycemia/diabetes”. Furthermore a new figure regarding tentative mechanisms implicated in glycemia in COVID-19 has been added
