

Answering reviewers

05315572

Specific comments to authors

The authors addressed the management of diabetic foot ulcers and challenge. This review summarises the current knowledge on the subject; however, it is unfocused and difficult to follow. The authors should add their original point and conclusion.

Answer:

We aimed to summarize the current knowledge about diabetic foot ulcers. We aimed to make it easier to follow by dividing the text with main headings and subheadings. Thus, it became easier to focus on the subject under each heading. We also tried to summarize the points that should be emphasized by expanding the conclusion part.
