**Title: Markers of insulin resistance in PCOS women: an update**

### **Specific comments to author**

This article provides a comprehensive review of insulin resistance in women with PCOS. Further understanding of these markers will help identify which markers can be used effectively to assess insulin resistance in women with PCOS in Sub-Saharan Africa. I think this is an interesting study that has important implications for insulin resistance in women with polycystic ovary syndrome. The author should modify the format of all the references according to the requirements of the journal, and the PMID and DOI were missing in all the references. The manuscript can be accepted and published in World Journal of Diabetes after minor revision.

### **Answers to reviewers:**

1. The revised manuscript has been corrected by American Journal expert
2. PMID and DOI have been added to all the references
