#1	The signs and symptoms of EDKA may be similar to that in DKA but with normal blood sugar levels, which may make diagnosis challenging. Outcomes of EDKA are good, if recognized early and corrective actions are taken. Hence, physicians managing such patients must be aware of this potential complication and must educate their patients accordingly to ensure early diagnosis and management.	Thank you for your inputs.	Necessary changes made in the conclusions.
#2	This paper is valuable for the diagnosis and treatment of ketosis in patients with normal blood glucose.	Thank you for positive comments.	No changes made
