

21405 - Answering Reviewers

Reviewer No. 00060494:

1. Subtitles of adiponectin have been adjusted.
2. The English grammar and word spelling have been corrected.
3. Though adiponectin is involved in metabolic syndrome, detailed discussion in this respect is deliberately limited considering the size of the article.

Reviewer No. 00058872:

The article, as the name suggests, is mainly focused on linking type 2 diabetes mellitus with obesity through adipocytokines and other factors. Hence, non-alcoholic fatty liver disease and associated complications have not been taken into consideration.
