COMMENTS TO AUTHORS

It should be important to check the MS in order to capitalize the names of the Authors quoted. Moreover when pointing to the various genetic disorders it should be nice to condense the information and not to have too many subchapters.

Response to the comments

Thank you for the valuable comments.

The quoted authors names have been checked.

The information on genetic disorders have been condensed to reduce the subchapters.

COMMENTS TO AUTHORS

Dear Editor: Professor Varadarajan made a mini-review regarding the topic "Infantile onset diabetes mellitus in developing countries -India" The topic may contribute to circulate the knowledge for the current condition of infantile onset diabetes mellitus in India. There are tow major flaws in the paper. The first is there were too many grammar errors leading to very difficultly reading. The authors have to improve the writing to be more readable. The second is the current condition of India and what has been known in the Western world should be discussed separately. A table should be added to compare the current condition of India and the known facts in other Western countries.

Response to the comments:

Thank you for the comments

The article has been corrected in respect of the grammer as suggested

A paragraph has been added and text coloured red - comparing the data from western world with developing countries.
