34189-ANSWERING REVIEWERS

Re: Ms # 34189 FOV- Gut-brain crosstalk regulates craving for fatty foo

Dear editor:

Thank you for providing a prompt and fair critique of my Field of Vision manuscript. I am grateful to both Reviewers for their thoughtful criticisms and suggestions. In addition to revising my manuscript, I submit the following response to the Reviewers' critiques:

1. **Reviewer #1 "The comment addresses a very hot topic in the field of metabolomics and neuro-sensing." The reviewer also suggested that "a scheme illustrating the essentials of the gut-brain crosstalk should be given."**

I wish to thank the Reviewer for an excellent suggestion. The Reviewer would be pleased to know that the journal paper discussed in my Commentary, in fact, contained an excellent illustration as a "GRAPHIC ABSTRACT." Thus, I strongly felt that there was little justification in DUPLICATING this fine illustration for the FOV Commentary. I have incorporated a statement to guide the reader of the FOV to consult the GRAPHIC ABSTRACT in the original publication (In the Last Paragraph of my Manuscript, highlighted in RED).

2. **Reviewing Editor has pointed out a spelling error in Paragraph 9 of the manuscript.**

We have corrected this error and sincerely apologize for the mistake.

With kind regards.

Sincerely
Rajendra Raghaw PhD
Professor
