Name of Journal: *World Journal of Diabetes*

ESPS manuscript NO: 28589

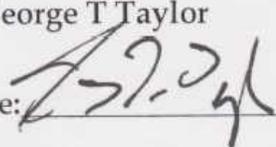

Manuscript Type: Review

Response to Reviewers

The authors appreciate the honest and thorough input from the reviewers and have addressed their suggestion accordingly. Many aspects of the manuscript's text have been revised for reasons of clarity and/or succinctness, as highlighted in the revised document. Also, the manuscript has been thoroughly edited for grammatical errors as suggested by two of the three reviewers. One reviewer suggested that the authors include tables or figures for each section. While a table or figure for each section was not attainable, a figure has been supplied that illustrates that different molecular pathways associated with neuroprotection as described in the manuscript. This figure was initially submitted with the manuscript but the authors are unaware if it was initially available to the reviewers.
