

Dear Editor,

The under peer review letter to the Editor (LTE) sums up some crucial points of the original paper and presents its importance regarding use of minimally invasive techniques in gastric ectopic pancreas. By underlying its strong points and limitations, it provides a fruitful summary of the original paper. This LTE reports two other series of patients undergoing ESD, which are also reported in the initial paper and are adequately presented and analyzed. Finally, the tone of the letter is constructive and the length is acceptable. Overall, the presents LTE offers a favorable support of the original article and also of future perspectives.

Thank you for the time and effort taken to evaluate the letter to the editor.
