

To the Editor:

We appreciate the opportunity to address the Editors' and Reviewers' comments and revise our manuscript "**Manuscript NO: 65434 - Effects of Helicobacter pylori Infection in Gastrointestinal Tract Malignant Diseases: From the Oral Cavity to the Rectum**". We had followed reviewers' suggestion and modified our manuscript accordingly. All page and paragraph numbers refer to locations in the revised manuscript.

Thanks again for your kindly review of our article.

Sincerely,

Kuang Chun Hu, M.D. Ph.D.

Response to Reviewer's comments

Manuscript NO: 65434

Editor's and Reviewer's Comments	Our Response	Location of edits
Reviewer 1:		
<p>General : typos have to be corrected Have to be italicized : "et al." "versus/vs" All numbers below 12 have to be written in full letters if appropriate. All statistical results that were not significant have to be suppressed, as they are misleading.</p>	<p>We appreciate the reviewer's useful opinion. We agree with the reviewer that we had corrected our article. All numbers below 12 have to be written in full letters.</p>	
<p>If the authors says that "factors has already been discussed by many researchers", they have to give details. For all part of the manuscript that focused on the 'other risk factors for" I would recommend to discuss impact of Hp infection in these context.</p>	<p>We thank the reviewer for this helpful suggestion, and we have reframing our article section. We had removed “ other risk factors of cancer” section from article.</p>	<p>We had removed “other risk factor of.... “ topic in each section.</p>
<p>Moreover, in order to ease the understanding of the manuscript, authors have to add to each part a table that summarize the principal data they indicate in a standardized manner.</p>	<p>We appreciate the important point about legend of our table. We have added to each part of table (table2 to 7) and summarize the principal data.</p>	<p>Table 2 to Table 7</p>

<p>Bacterial strain could be discussed in paragraphs that discuss geographical disparities The part of the manuscript focusing onto the gastric cancer has to be suppressed (and the title modified) as this part is clearly insufficiently detail and could be detrimental for the quality of the manuscript. BE ware : on the colorectal cancer part of the manuscript, it is false to consider that statistical association of some bacteria could have a direct effect on the formation of colon neoplasms or cancer.</p>	<p>We thank and agree with the reviewer suggestion and rewrite these sentences. And in the section of introduction, we discuss the bacteria strain related to geographical disparities</p>	<p>Page 5 , Page 21-22 and ; 30-31</p>
<p>EDITORIAL OFFICE'S COMMENTS</p>		
<p>1. The authors did not provide the approved grant application form(s). Please upload the approved grant application form(s) or funding agency copy of any approval document(s)</p>	<p>We thank the reviewer for this helpful suggestion. We had add grand number and funding in title page. Grand number and Supported by: MMH-109-27; MOST 109-2314-B-195-007</p>	<p>Title page</p>
