

It is a retrospective study of an uncommon subtype of colorectal carcinoma. The author statized some information of this cancer including the age, location, stages, metastasis, recurrence and survival.

#### Reviewer Query 1

In the discussion, the author gave some treatment suggestions based on the literature. I think they should supply more data on the treatment information on their own patients.

Response:

We don't perform cytoreductive surgery & HIPEC for SRCC as of now. Currently we follow the same treatment protocol as conventional adenocarcinoma. This is exactly what we are trying to bring into notice that probably we need to treat SRCC differently than conventional adenocarcinoma & in this we suggest to evaluate role of prophylactic HIPEC in SRCC during curative surgery in a randomized trial.

#### Reviewer Query 2

There are some language mistakes. Please check the manuscript carefully to correct them.

Response:

Corrected in the revised manuscript

#### Reviewer Query 3

Nonspecialist don't know some of the abbreviation, such as NACTRT, AC et al. Please give the full name at first use.

Response:

Corrected in the revised manuscript.
