

1. Interesting case presentation of an extremely rare disease. There are some questions regarding this issue: any possible causes of the hypereosinophilic status: any concomitant medications? nutrition habits? etc.

I have revised the manuscript to account for Reviewer 1's comment regarding additional medications/nutritional habits that could influence the eosinophilia. I have added an extra line to the HPI section. This was uploaded to the website

2. Thank you for a report about a rare case. There is a mistake in this report. In Figure 5, the word "Text" written by white font is involved. Please confirm it.

I have revised Figure 5 and removed the word "text" from the middle of the image.

I have saved all of the images in JPEG or TIFF format so that they can be edited by your staff.
