

Answering Reviewers

Reviewer 1: The paper brings relevant data. However, it needs language revision, for grammar and style.

Dear reviewer, Thank you very much for your review. We received advice that language revision was needed, therefore we made revision throughout.

Reviewer 2: The study is thorough and well presented. I am impressed with the enrollment cohort size of 1715 patients within such a short time of 3 months. Good job!

Dear reviewer, Thank you very much for your review. There were no special changes to the scientific content, because there was no special advice from reviewers.

Dear editors,

In addition, we added highlight and open access items, because these were missing. Revisions are highlighted in yellow.

Thank you for your consideration. I look forward to hearing from you.

Sincerely,

Kenichiro Majima
