

Firstly I would like to thank you the reviewer their revision ,corrections and suggestion ,
thar I will try to implement them

Secondly, I will continue answering the suggestion of reviewer and improving the text

1. The title requires modification

I have changed hoping they will fit better the content of the editorial “**ATTAINING THE MOST ACCURATE DEFINITION OF PRENEOPLASTIC COLONIC LESIONS IS LIKELY A CRUCIAL STEP TO ENHANCE THE EFFECTIVENESS OF OUR COLON SCREENING POLICY AND IMPROVE OVERALL OUTCOMES**”

2. Abstract should be reorganized having background, method, discussion and conclusion

I have already done it

3. Key words please add 4 or 5 key words

colonoscopy screening, interval colorectal cancer or post colonoscopy CRC, chromoendoscopy (CE), virtual chromoendoscopy , high-definition white-light endoscopy (WLI) , TXI (Texture and Color Enhancement Imaging) ; Indigo carmine; Adenoma; Sessile serrated lesion

4. The background is some what good ,

Nothing to add.

5. There is no method described. There should be a method indicating how the author selects information sources literatures.

6. Subtitles discussion should be incorporated Different subtitles have been incorporated to the core of the article

**INTRODUCTION/BACKGROUND,
ENHANCING THE DETECTION OF COLONIC LESIONS: METHODS AND
STRATEGIES,**

**CLINICAL IMPLICATIONS OF SCREENING COLONOSCOPIES USING
CONTRAST-ENHANCED IMAGING (CE) AND ADVANCED ENDOSCOPIC
EQUIPMENT,
DISCUSSION
CONCLUSSIONS**

7. Some of the References are outdated, it is better to avoid literature published before 2015 I have thoroughly revised the bibliography, excluding entries before 2015 and adding some new ones. However, it's worth noting that several entries carry significant importance and have been retained.

References eliminated.

Ribeiro MD, Soares J. Chromoendoscopy. *Endoscopy*. 2009 ;41(1):93. [PMID 19160163 doi: 10.1055/ s-0028-1103492]

8. Quality a. Language editing should be done, there are many fragments of ideas.

and the prevalent occurrence of pale, flat morphology in this region, making it far more difficult to detect lesions. Changed to “And the frequent presence of pale mucosal lesions with a flat morphology in this region.”

Scientific communities changed to scientific societies.

... As a result, its use is not indicated as a conventional screening method Changed to “Nevertheless, its use is not recommended as a conventional screening method [13], but it proves highly valuable in the surveillance colonoscopy of inflammatory bowel disease.”

..mitigates the risk of interval cancer Changed to mitigates the risk of interval colorectal cancer

,,,The magnification capability enables image enlargement of up to 150 times, facilitating the analysis of characteristics Changed to the magnification capability allows for image enlargement of up to 150 times, facilitating the analysis of characteristics of colonic polyps, such as ...

... differences in the rate of adenoma detection. Changed to differences in the rate of polyps and adenomas detection

white-light endoscopy (WLI) in regard to the rate of adenoma detection. Changed to white-light endoscopy (WLI) regarding the rate of adenoma detection.

These facts are apparent; the rate of interval cancer could decrease with a reduction in the rate of incomplete resection, and perhaps more small lesions could also be increasingly detected. Changed to CONCLUSIONS

We need to emphasize certain evident facts derived from this study. For instance, the combined use of TXI and CE proves to be most effective, surpassing the individual efficacy of both WLI and CE. Additionally, smaller lesions could also be more effectively detected, and the surface pattern and borders of the lesions could be better characterized

and analyzed. Reducing the rate of incomplete resection holds the potential to decrease the percentage of interval cancer.

b. Every paragraph should have a reference. We believe that the vast majority of paragraphs now include the appropriate references; however, we have had to include some additional references. Nevertheless, the author's opinions and thoughts remain integral aspects of the text.

c. text alignment should be justified. OK. It was done.

d. standard reference writing tools(software like endnote, Mendeley or others))should be used.

We have now incorporated the use of the EndNote program
