

Response to Editors and reviewers comments:

Reviewer #1: **Scientific Quality:** Grade C (Good) **Language Quality:** Grade B (Minor language polishing) **Conclusion:** Major revision **Specific Comments to Authors:** it is very interesting paper to show a direct relation between SQSTM1 and hsa-miR-519d-3p, and they could be used as surrogate diagnostic markers for stem cell autophagy in early-stage hepatocellular carcinoma. Albeit, I consider these findings provide insight into the development of liver cancer. I still have some minor suggestions. 1, The author should follow the Journal Guide, and reorganize the Figure and Methods.

Response to the reviewer: Thank you very much for your kind praise and suggestions. We have to note that Enago the professional copyeditor provided revision both for native language revision, in addition to revision of the manuscript according to the journal guidelines before the first submission.
