Insights into Skullcap Herb-Induced Liver Injury

Soldera J *et al.* Skullcap-induced HILI

Jonathan Soldera

Jonathan Soldera, Acute Medicine and Gastroenterology, University of South Wales, Cardiff CF37 1DL, United Kingdom

Reviewer:

authors raise the concern on herb-related liver injury, it is so significant that no one do something more specific for herbal identification, dose and course and different persons. it helps people to address it!

Answer to the Reviewer:

Thank you very much for your thoughtful and constructive feedback on our manuscript. We sincerely appreciate your time and efforts in providing valuable insights.

We are pleased that you recognize the significance of our work in highlighting the concern of herb-related liver injury. Your encouragement further motivates us to contribute meaningfully to addressing this important issue. We completely agree with your observation that there is a lack of specificity in current practices regarding herbal identification, dosage, and course variations among different individuals. We share your view on the potential impact of our research in enhancing our understanding of these aspects and guiding future approaches.
